

Forestry grant and premium schemes

Donal Magner

State funding for forestry is now mainly confined to afforestation, roading and broadleaf tending. The Renewed Programme for Government agreed in October 2009 proposed to increase annual afforestation to 10,000 ha but average planting for 2010 and 2011 will fall short of this target by approximately 3,000 ha. but will be higher than planting achieved in 2008.

Changes in 2011

The Forest Service announced changes to afforestation grants and planting specifications in early 2011 to maximise the area planted and to ensure a viable support programme. A twin approach was adopted whereby funding cuts were made to some grant premium categories (GPCs) and reduced stocking rates for some broadleaves will reduce the cost of establishment but not the area planted. Also, the Forest Service is encouraging foresters and growers to choose IS436 certified fencing stakes and strainers. Growers who opt for IS436 will receive an additional €50 per hectare for IS436 fencing and €150 for deer fencing. The fencing standard (IS436) ensures that stakes are dried and treated with suitable preservatives to provide a service life of at least 15 years.

Stocking densities

The stocking densities of oak, beech and alder have been reduced which will result in savings for the grower in plant and establishment costs. Alder stocking will reduce from 3,300 to 2,500/ha while oak and beech reduce from 6,600 to 3,300/ha. Although the grant for oak is cut from €6,470 to €5,000/ha, it will be possible to establish a crop at this level of funding because plants required have been reduced by 50% and there are knock on savings in operations such as cultivation, planting and vegetation control. Grants have been adjusted accordingly (Table 1).

The various grant aided schemes are included in the Forest Service Forestry Schemes Manual and this should be consulted along with other Forest Service publications such as the *Code of Best Forest Practice - Ireland* and the suite of environmental guidelines.

A summary of the various schemes is available in the following pages including the steps to be taken when applying for planting approval.

The Forest Service announced changes to afforestation grants and planting specifications in early 2011 to maximise the area planted and to ensure a viable support programme.

Table 1: Afforestation Scheme: revised grant rates (€/ha) effective from 1 January 2011

Grant / premium category (GPC)	1st grant	2nd grant	Total grant	Additional fencing allocation IS436 posts	Alternative fencing allocation (non IS436)	Total available funding
1. Unenclosed all species	1,500	500	2,000	400	350	2400
2. Sitka spruce / lodgepole pine	2,200	700	2,900	400	350	3300
3. 10% diverse	2,250	750	3,000	400	350	3400
4. Diverse	2,500	800	3,300	400	350	3700
5. Broadleaves	3,600	1100	4,700	500	450	5200
6. Oak*	3,800	1200	5,000	500	450	5500
7. Beech*	3,800	1200	5,000	500	450	5500
8. Alder*	2,400	800	3,200	500	450	3700

Application process for the afforestation scheme

Approval

All proposed forestry developments must receive the prior written approval of the Forest Service.

Following completion of the relevant operations, formal applications for payment of the Afforestation Grant, Premiums and second Instalment Grants must be made by the applicant.

Form 1 – preplanting approval application

Form 1 applications must be completed by the applicant and a qualified forester whose name is included on the Register of Approved Foresters. This register is available on request from the Forest Service. Form 1 needs to accompany a number of enclosures including, location map, certified Species Map, Biodiversity Map, Cultivation Plan, Forest Service acknowledgement sheet and a number of reports where relevant such as Calcium carbonate tests and drainage survey report.

If there are any environmental considerations identified, the application is simultaneously referred to the relevant prescribed body. Certain sites in this category require a process of public consultation.

If the site is greater than 2.5 ha a notice of the application is published in the local press.

Continuous inspection of plantations is vital to ensure that the crop reaches maximum potential.

Part of a winning Team

The Forest Service is encouraging those intending to plant to choose IS436 certified fencing stakes and strainers. Growers who opt for IS436 will receive an additional €50 per hectare for IS436 fencing and €150 for deer fencing.

The Forest Service April 2011 circular outlined a number of conditions for grant aid: "To qualify for the higher IS436 grant rates all fencing posts claimed must be certified to this standard. Where part of the fencing claim contains non IS436 material, the entire application will be assessed at the non IS436 grant rate." The circular also states: "All applications for grant aid must be clearly identified outlining the location of each fence type and length erected in metres on a biodiversity map or a separate "Fencing Map" as described in the revised mapping standards."

To receive the higher grant an "IS436 Fencing Post Certificate must be completed and attached to the Form 2" when making a grant application. Samples of the required fencing certificates are available from the Forest Service. Only companies that are certified by the NSAI to produce IS436 are entitled to reproduce this certificate. The standard ensures full traceability.

Table 2: Afforestation Scheme: premium rates (€/ha) (new approvals) effective 1 January 2011

Grant / premium category (GPC)	Farmer	Non-farmer
1. Unenclosed – all species	155	126
2. Sitka spruce / lodgepole pine	369	181
3. 10% diverse	427	181
4. Diverse	454	181
5. Broadleaves	481	195
6. Oak	515	195
7. Beech	515	195
8. Alder	481	195

Source: Adapted by D. Magner from Forest Service (2010).

If the proposed development is greater than 25 ha the application is referred to the Local Authority for observations.

If the site is greater than 50 ha an Environmental Impact Assessment is required.

If an approved forester fails to identify specific considerations, the referrals may be delayed.

Form 2 – 1st grant and premium application

The first instalment of the afforestation grant and first premium are due for payment on completion of the initial site operations and submission of a completed Form 2. The application must be completed and signed, at the time of submission, by both the applicant and the approved forester to whom pre-planting approval is issued.

Form 3 – 2nd instalment grant application

The second instalment afforestation grant is due for payment four years after the completion date of the plantation. Application for second instalment grant may be liable for an on-site inspection. An application for payment (Form 3) must be completed and signed by both the applicant and the approved forester at time of submission.

Forest management plans

All applicants must submit a management plan at Form 3 stage for plantations which are 10 ha or greater or where over 5 ha of broadleaves have been planted. The plan needs to outline clearly proposed management plans to year 10.

Form 4 – subsequent premium application

The farmer rate of premium is payable for a period of 20 years and the non-farmer rate for a period of 15 years.

SUMMARY OF GRANTS FOR HARVESTING ROADS

Category	€/linear metre	Density (metre/ha)
Harvesting Road	45	25
Harvesting Upgrade or Extension as defined.	45	15
Management Road	n/a	n/a

Grants of up to 80% of eligible costs incurred in the construction of a forest road are available subject to the maximum described above. The Minister reserves the right to alter these rates.

All premiums subsequent to the first premium are applied for by completing a Form 4 which issues to the applicant annually from the Forest Service. At the end of year 10 the applicant must submit an updated species map and management plan for the subsequent 10 years.

Self assessment companies and approved foresters

The applicant and a forester whose name is included on the Forest Service Register of Approved Foresters must complete all Form 1, Form 2 and Form 3 applications. Any application not signed by the applicant and approved forester will not be accepted. The register includes both foresters employed by the companies approved under the Forest Service Self-Assessment Scheme and private consultants. Private consultants wishing to be included on the Register of Approved Foresters must complete an application form, available from the Forest Service, which includes a signed undertaking that they will comply with the Forest Service Guidelines. In addition they must have Professional Indemnity Insurance.

SUPPORT SCHEMES

The following support schemes or back up measures provide funding for a range of activities designed to conserve and restore woodlands and in the case of established crops, add value to forests commercially, economically and silviculturally.

Forest road scheme

Limited grant aid is provided for the construction of harvesting roads which are in accordance with the *Code of Best Forest Practice* and Forest Service environmental guidelines. See also COFORD forest roading manual.

Harvesting roads: Successful applicants to this scheme need to show that the forest area to be roaded is due to be thinned and the 20 m threshold per ha may not always apply. In order to facilitate harvesting, access by timber trucks is essential. The economics of road building dictate that roads are constructed just before harvesting.

Successful applicants for the harvesting road scheme need to show that the forest is due to be thinned.

The information provided on the forestry grant and premium schemes featured in the following pages is correct as at November 2011.

The availability, approval conditions and funding of some schemes may change during 2011 so readers are advised to check the following websites:

- Forest Service (www.agriculture.gov.ie/forests-service)
- ITGA (www.itga.ie)
- Teagasc (www.teagasc.ie/forestry)

All schemes are operated by the Forest Service, Department of Agriculture, Marine and Food, the national forest authority responsible for forest policy, regulation, administration of afforestation and other forestry grant and premium schemes, forest protection, control of felling and promotion of research in forestry and forest produce.

In order to assess a harvesting road application the following criteria are used:

- Timber must be ready for harvesting within the next five years (now reduced to one year).
- The length of road that will be grant aided is based on the area of the plantation and the presence of existing harvesting roads.
- Grant aid will not be given in excess of 20m/ha or €571.40/ha.
- Applicants may build roads in excess of 20 m/ha to harvesting standard but grant aid cannot exceed €571.40/ha.
- Existing roads may require upgrading at the time of harvesting and may be grant aided.

Reconstitution of woodlands

This grant is under review and applies when damage to a plantation is as a result of natural causes. It no longer applies to plantations damaged by fire and wind.

Grant aid is provided where the plantation had been well managed and maintained up to the time it was damaged. Examples of natural causes that most often affect plantations include frost, disease and windblow. In the case of windblow a reconstitution grant is normally allowable where the windblow occurs before the plantation reaches two-thirds of the reduced age of Maximum Mean Annual Increment.

Grant rates up to a maximum of €3,297/ha for conifers and €7,604/ha for broadleaves.

NeighbourWood scheme

This scheme has been suspended indefinitely.

Native Woodland scheme revised

The establishment element of the Native Woodland Scheme (NWS) was revised by the Forest Service, in 2011. Procedural changes were designed to streamline applications and make the scheme more user friendly. The NWS – Establishment is a grant package to support growers in developing new native woodlands on greenfield sites. The NWS – Establishment offers farmers a biodiversity-focused grant package alongside the Afforestation Scheme. The revised scheme may be a suitable option in areas deemed generally sensitive from an environmental, landscape or amenity perspective, including greenfield sites near or adjacent to existing designated woodlands and other important habitats.

When the NWS was originally launched, it had two separate elements: conservation of existing woods and establishment of new native woodlands. The second element has now undergone a major revision to make it more user friendly. Using a

2011 brought an increase in the number of forest fires with the dry weather conditions. *Are you protected for 2012?*

Growing Timber Insurance

Insure your woodland for:

Reconstitution of Trees

Following the abolition of grant aid for reestablishment costs make sure that you are covered for the cost of replanting after a Fire or another insured loss such as Storm¹.

Crop Value

Loss of investment cover for growing timber compensates owners for the growing years lost as a result of fire damage to their plantation or the occurrence of another insured peril.

Fire Brigade charges

Public Liability

Limit of indemnity €2,600,000 any one accident
Unlimited any one Period of Insurance

Employers Liability²

Limit of Indemnity €13,000,000 any one accident
Unlimited any one Period of Insurance

This is a unique specially designed FBD product (endorsed by the IFA), which will grow in value as your plantation grows.

Contact your local FBD Office now for a quotation on **1890 617 617**

Terms & conditions apply

1. Storm cover available on trees up to 20 years old.
2. Employers Liability excludes felling and lopping.

FBD Insurance plc is regulated by the Central Bank of Ireland

new site appraisal framework, the applicant and forester identify the native woodland type for the site, link it to the corresponding Grant and Premium Category (GPC), and submit the application on that basis. Under the revised scheme, the input of a NWS ecologist and the development of a detailed native woodland plan are no longer required."

The actual grant and premium rates are the same as the standard Afforestation Grant & Premium Scheme except the GPCs reflect the scheme's focus on native species. While the scheme is biodiversity orientated, the production of quality hardwoods is encouraged under the scheme, using continuous cover forestry techniques where compatible.

The scheme is implemented by the Forest Service, in partnership with Woodlands of Ireland, National Parks & Wildlife Service, and the Heritage Council. Growers interested in the scheme should contact their local registered forester or the Forest Service, Johnstown Castle Estate, Co. Wexford (lo-call 1890 200 223 or e-mail forests-service@agriculture.gov.ie).

Broadleaf thinning/tending

The Forest Service operates a Broadleaf Thinning/Tending scheme.

Grant aid of €750/ha is available to tend and thin plantations – operations necessary to add value to the crop but which provide little or no income.

UNIVERSITY COLLEGE DUBLIN
HONOURS DEGREE IN FORESTRY (FETAC Level 8)

www.ucd.ie/agandvet/newforestry.html

A 4-year programme that equips graduates with the education & skills that enable them to become leaders in the forestry profession. Further study to Master's & PhD level is also possible.

Graduates work in all areas of the forestry sector including Teagasc, Forest Service, Coillte, management companies, wood processing, NGOs, forestry research, environmental agencies & renewable energy

Transferable skills make graduates highly employable in other sectors, including nature conservation, IT, land-use planning & financial services.
